

CABLETIME EMERGENCY BROADCAST SYSTEM

Cabletime's Emergency Broadcast System enables pre-recorded A/V messages to be saved on a multimedia digital signage system which, in an emergency situation, can be triggered via a Crestron touch screen control system to appear on display screens located strategically throughout the building or campus.

CEBS delivers a powerful combination of pre-recorded announcements, live video distribution, and a control mechanism to ensure that messages get distributed thoroughly and quickly.

Multiple CEBS screens placed strategically around the campus or organization can provide critical information and instructions. Installation is as simple as connecting a Cabletime MediaStar system with Crestron touch screen control systems to the LAN to enable A/V announcements from the command and control center.

Cabletime Emergency Broadcast System Applications:

- Emergency A/V announcements
- General public announcements
- Sporting and social events
- Housing and cafeteria announcements
- Departmental notices and programs
- Class scheduling and changes
- Traffic, weather and safety announcements
- Holiday change notices
