

PARTNER STARTER KIT

IPTECHVIEW SURVEILLANCE & SYSTEM for Remote Management and UNIVERSAL Cameras

IPTECHVIEW reimagines video surveillance with a simple-to-use system, pre-configured cameras for faster installation, and a secure remote management platform for all cloud video surveillance projects. Our solution reduces installation time and costs while providing your customers a premium video surveillance experience that provides actionable insights and saves them time and money.

Our partner starter kit includes pre-configured cameras, online material, remote support for setup, and FREE certification training (\$500 value) with hands-on labs where many concepts are shared. The partner training and pre-sales support will help you learn the installation and setup process, and the in-person certification training will deepen your understanding of our technology. To get started, install a few cameras in your office, and let your team experience our system firsthand. Then become fully trained at the certification training and become eligible to receive leads from IPTECHVIEW. With IPTECHVIEW's partner starter kit, you'll have everything you need to become an IPTECHVIEW partner and start selling our cloud-based video surveillance platform.

PARTNER STARTER KIT | IPT Universal Cameras
